

# Kohl's Pharmacy Vivitrol Program

## Vivitrol: An injectable drug for opioid and alcohol dependence

Kohl's pharmacy has recently begun an addiction management therapy program in which we administer Vivitrol. If any of your patients are struggling with substance abuse, please let us help you!

Our company would be able to collaborate with your office to offer this service to any patient that would qualify. We request **at least two weeks' notice** that they are interested in order to check that the medication is billable under the patient's insurance and to set them up at one of our seven Omaha locations.

We will administer, bill, and counsel the patient on the medication, and also remind them of appointments – all we need is a prescription from you. You will still retain your patient at your office, we are only interested in the management of their substance use and utilizing you as a prescriber.

Please feel free to contact us if you have any questions or concerns!
